Artificial Intelligence and Machine Learning (5171020)

Module name english	Artificial Intelligence and Machine Learning					
Type of module	Pflichtmodul		**Responsible for module**		Prof. Dr. Ivan Yamshchikov	
Lecturer	Prof. Dr. Ivan Yamshchikov					
Language of instruction, L. of examination	Englisch		**Semester**		1	
SWS	4		**Teaching and learning formats**		Seminaristischer Unterricht	
ECTS-Credits	5		**Type of examination**		Schriftliche Prüfung (90 Min.)	
Bonus benefits						
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)**	90
Duration of module	1 Semester		**Frequency**		Sommersemester	
Type of grading	Differenzierte Note		**Verwendbarkeit**		Artificial Intelligence	
Conditions for participation	None					
Recommended prerequisites						
Module's learning outcomes	Upon completion of the module students: • knowing traditional AI techniques, how the evolved and how they are linked to current approaches • understand basic types of problems to which machine learning algorithms can be applied and can compare them in terms of data that the algorithm expects to receive and the objectives they use for training • have a general overview of key machine learning methods, understand their mechanism and major pros and cons, and can use these (relying on existing implementations) to solve typical learning problems by developing own pipelines and models • can evaluate results of learning exercises and compare different methods in terms of their accuracy as well as computational efficiency and can report on these in oral as well as written form using appropriate tools for expert or more general audience (e.g. via Jupyter Notebooks) • can follow and grasp formal description of standard machine learning algorithms and translate these into a working implementation in standard machine learning software • can critically assess data analytical and machine learning exercises in terms of quality of the experimentation pipeline and the clarity and transparency of the experimental protocol					
Module content	• Introduction in Artificial Intelligence - overview of the development of AI within the last few decades - introduction into symbolic vs sub-symbolic concepts of AI - classical AI methods (adatron, boltzman machine, hopfield network, cellular automata and alike) - brief introduction to semantic knowledge representation with links to (fuzzy-) logic, ontologies • Main concepts and principles of machine learning - Basic types of machine learning (supervised/ unsupervised / reinforcement learning) and their use - Main learning goals (prediction - regression/ classification, knowledge discovery – clustering / density estimation, etc.) - Formalism of the learning problem - Ethical and societal impacts of machine learning • Foundations of learning from data - Objective (loss) function - Expected/ empirical risk - Model complexity (over-/ under-fitting) - Model training/ validation/ testing - Model evaluation/ selection • Selected key machine learning algorithms - Linear models for regression/classification - Regularization, ridge regression - Variable selection, sparse models (lasso) - Mixture models (k-means clustering, Gaussian mixtures) - Non-parametric methods (kernels, trees, forests) • Programming for machine learning - Matlab / Python and packages (Numpy, Pandas, Sci-kit learn, Jupyter Notebooks, and other)

Artificial Neural Networks and Cognitive Models (5171030)

Module name english	Artificial Neural Networks and Cognitive Models				
Type of module	Pflichtmodul		**Responsible for module**	Prof. Dr. Magda Gregorová	
Lecturer	Prof. Dr. Magda Gregorová				
Language of instruction, L. of examination	Englisch		**Semester**	1	
SWS	4		**Teaching and learning formats**	Seminaristischer Unterricht	
ECTS-Credits	5		**Type of examination**	Portfolio	
Bonus benefits					
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)** 90
Duration of module	1 Semester		**Frequency**	Sommersemester	
Type of grading	Differenzierte Note		**Verwendbarkeit**	Artificial Intelligence	
Conditions for participation	None				
Recommended prerequisites					
Module's learning outcomes	Upon completion of the module students: • can place artificial neural networks within the broader area of machine learning, understand their major advantages and disadvantages, and are aware of major applications of ANN as well as selected advanced models under research and their fundamental ideas • understand and assess the critical differences between the basic ANN architectures (MLP, CNN, RNN), can implement them in standard deep learning software packages, and can train, test, and evaluate the ANN models over real data • building on the experience of working with their own ANN implementations, can reuse publicly available implementations of more complex models to carry out experiments over real datasets, can compare the performance of these across various models and their hyperparameter setups • understand the importance of transparency and reproducibility in deep learning experimentation and can present in written as well as oral their learning and evaluation pipeline including relevant description of the selected software and hardware configuration • are aware of the ethical and societal impacts of machine learning and deep learning and can critically assess deep learning reports along these lines				
Module content	• Artificial neural networks (ANN) in machine learning (ML) - Basic concepts of learning algorithms and typical tasks - Model development workflow, hyperparameter tunning, performance measures and model selection - Ethical and societal aspects (open access, data governance, fairness, transparency, reproducibility, safety and robustness, interpretability and human oversight/trust, ecological footprint) • Basic ANN architectures - Multilayer perceptron (feed forward) - Convolutional neural networks - Recurrent neural networks • ANN model regularization - Norm penalties - Data augmentation - Early stopping - Dropout • ANN model optimization - (Stochastic) gradient descent - Backpropagation - Momentum methods - Learning rate scheduling • Major ANN applications and selected advanced models - Computer vision (object detection, image classification, style transfer) - Natural language processing (word2vec, BERT) - Autoencoders - Generative models • Deep learning software packages (one of these) - PyTorch - Tensorflow

Reasoning and Decision Making under Uncertainty (5171040)

Module name english	Reasoning and Decision Making under Uncertainty					
Type of module	Pflichtmodul		**Responsible for module**		Prof. Dr. Frank Deinzer	
Lecturer	Prof. Dr. Frank Deinzer					
Language of instruction, L. of examination	Englisch		**Semester**		1	
SWS	4		**Teaching and learning formats**		Seminaristischer Unterricht	
ECTS-Credits	5		**Type of examination**		Portfolio	
Bonus benefits						
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)**	90
Duration of module	1 Semester		**Frequency**		Sommersemester	
Type of grading	Differenzierte Note		**Verwendbarkeit**		Artificial Intelligence	
Conditions for participation	none					
Recommended prerequisites						
Module's learning outcomes	- Students develop further knowledge and skills on the necessary mathematical foundations for understanding and developing algorithms for AI. - Students can apply the principles of Reinforcement Learning algorithms - Students can use the principles of modelling gents, environments and rewards. - Students understand the necessity of function approximations in learning. - Students understand the concepts of statiscal sensor fusion - Students can realize sensor fusion applications - Students build on their acquired knowledge to master learning problems.					
Module content	The course is composed of 2 thematic blocks. Block A: Reinformcement Learning 1. Basic Reinforcement Learning Concepts - Actions and States - Goals, Rewards, Returns and Episodes - Policies and Value Functions 2. Basic Reinforcement Learning Methods - Finite Markov Decision Processes - Dynamic Programming - Monte Carlo Methods 3. Advanced tabular learning Methods - Temporal-Difference Learning - Bootstrapping Methods 4. Learning in Continuous State and Action Spaces - On-Policy Approximation - Value-function Approximation - Off-Policy Approximation - Approximate Eligibility Traces 5. Value Function Approximation Case Studies - Computer Vision: Action planning - Mastering Games: Backgammon, Go 6. Applications and Exercises Block B: Sensor Fusion 1. Using Bayes for Sensor Data Fusion - Modeling and Estimation of Densities - Sensor Fusion over Time 2. Hidden Markov Models and Viterbi Algorithm 3. Recursive State Estimation - Gaussian Filters - Nonparametric Filters 4. Applications

Springer. 2014 4. Thrun, Burgard, Fox: Probabilistic Robotics. MIT Press. 2005 5. Johnson, Freund, Miller. Miller & Freund's Probability and Statistics for Engineers. Pearson Further specialized literature will be announced in the course.

Parallel Programming (5171510)

Module name english	Parallel Programming				
Type of module	Wahlpflichtmodul		**Responsible for module**	Prof. Dr. Kai Diethelm	
Lecturer	Prof. Dr. Kai Diethelm				
Language of instruction, L. of examination	Englisch		**Semester**	1	
SWS	4		**Teaching and learning formats**	Seminaristischer Unterricht	
ECTS-Credits	5		**Type of examination**	Portfolio	
Bonus benefits					
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)** 90
Duration of module	1 Semester		**Frequency**	Unregelmäßig	
Type of grading	Differenzierte Note		**Verwendbarkeit**	Artificial Intelligence	
Conditions for participation	None				
Recommended prerequisites					
Module's learning outcomes	Students have a firm knowledge of the concepts and methods of parallel programming. They are aware of the capabilities and limitations of these concepts. They can select appropriate approaches for given applications and apply them to the problems at hand.				
Module content	The module will address the following topics: • Basic ideas of parallel computing • Hardware concepts for parallel computers (shared memory systems, distributed memory systems, GPU-based systems) • Amdahl's law • SISD, SIMD and MIMD software • Introduction to the programming paradigms OpenMP, MPI and CUDA • Code performance analysis and optimization (bottlenecks etc.) All parts of the module are accompanied by a significant amount of practical work on a high performance compute cluster that provides all the required hardware.

Mathematical Foundations of AI (5172010)

Module name english	Mathematical Foundations of AI						
Type of module	Pflichtmodul		**Responsible for module**		Prof. Dr. Martin Storath		
Lecturer	Prof. Dr. Martin Storath						
Language of instruction, L. of examination	Englisch		**Semester**		1		
SWS	4		**Teaching and learning formats**		Seminaristischer Unterricht		
ECTS-Credits	5		**Type of examination**		Schriftliche Prüfung (90 Min.)		
Bonus benefits							
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)**	90	
Duration of module	1 Semester		**Frequency**		Sommersemester		
Type of grading	Differenzierte Note		**Verwendbarkeit**		Artificial Intelligence		
Conditions for participation	None						
Recommended prerequisites							
Module's learning outcomes	- Students refresh and develop further their knowledge and skills on the necessary mathematical foundations for understanding and developing algorithms for AI; in particular, linear algebra, calculus, probability. - Students understand the principles of continuous optimization (constrained and unconstrained), are able to select appropriate approaches and they apply them for problems in AI. - Students are able to apply and evaluate the principles of probabilistic modelling and inference, and they create probabilistic models for frequently occurring kinds of data. - Students use the acquired mathematical skills to design and create frequently occurring building blocks of AI systems, such as linear regression, PCA, Gaussian mixture models and support vector machines.						
Module content	1. Advanced Vector Calculus • Multivariate derivatives and chain rule • Backpropagation and automatic differentiation • Linearization and multivariate Taylor series 2. Advanced Linear Algebra • Eigenvalues and eigenvectors • Singular value decomposition • Matrix approximation 3. Continuous Optimization • Gradient descent • Constrained optimization and Lagrange multipliers • Convex Optimization 4. Models and Data • Change of variables • Empirical risk minimization • Parameter estimation • Probabilistic modelling and inference • Model selection						
Literature	1. M. P. Deisenroth, A. A. Faisal, Cheng Soon Ong: Mathematics for Machine Learning, Cambridge University Press, 2020 2. C. M. Bishop: Pattern Recognition and Machine Learning, Springer, 2006 3. G. James, D. Witten, T. Hastie, R. Tibshirani: An Introduction to Statistical Learning, Second Edition, Springer, 2021						

Project Module 1 (5172050)

Module name english	Project Module 1					
Type of module	Pflichtmodul		**Responsible for module**		Prof. Dr. Magda Gregorová	
Lecturer	Prof. Dr. Arndt Balzer, Prof. Dr. Magda Gregorová					
Language of instruction, L. of examination	Englisch		**Semester**		1	
SWS	4		**Teaching and learning formats**		Projekt	
ECTS-Credits	5		**Type of examination**		Portfolio	
Bonus benefits						
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)**	90
Duration of module	1 Semester		**Frequency**		Jedes Semester	
Type of grading	Differenzierte Note		**Verwendbarkeit**		Artificial Intelligence	
Conditions for participation	None					
Recommended prerequisites						
Module's learning outcomes	Students can methodically process and solve comprehensive tasks. The students can develop and implement suitable solution strategies in a team. They know how team processes work and can assess how to contribute their own personality. The students can independently set up, implement, accompany and present a small AI project in a team. They can select and use appropriate development technologies and test and document their code.					
Module content	The students will work in groups to solve projects using AI techniques (supervised by at least one professor). The topics are provided by professors of the FIW, other faculties or external partners. In general the project will contain a software development (potentially accompanied by a technical solution) and a respective documentation or other form or presentation.					
Literature	1. Hands-on Machine Learning with Scikit-Learn, Keras, and TensorFlow: Concepts, Tools, and Techniques to Build Intelligent Systems, A.Geron, O'Reilly, 2019 2. The Data Science Design Manual, S. Skiena, Springer, 2017 3. Deep Learning, I. Goodfellow, MIT Press, 2016 Further literature will be given based on the respective project tasks.					

Project Module 2 (5172060)

Module name english	Project Module 2					
Type of module	Pflichtmodul		**Responsible for module**		Prof. Dr. Magda Gregorová	
Lecturer	Prof. Dr. Arndt Balzer, Prof. Dr. Magda Gregorová					
Language of instruction, L. of examination	Englisch		**Semester**		1	
SWS	4		**Teaching and learning formats**		Projekt	
ECTS-Credits	5		**Type of examination**		Portfolio	
Bonus benefits						
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)**	90
Duration of module	1 Semester		**Frequency**		Jedes Semester	
Type of grading	Differenzierte Note		**Verwendbarkeit**		Artificial Intelligence	
Conditions for participation	None					
Recommended prerequisites

Cloud Native (5171512)

Module name english	Cloud Native					
Type of module	Wahlpflichtmodul		**Responsible for module**		Prof. Dr. Pascal Meißner	
Lecturer	Dr. Harald Philipp Gerhards					
Language of instruction, L. of examination	Englisch		**Semester**		1,2	
SWS	4		**Teaching and learning formats**		Seminar	
ECTS-Credits	5		**Type of examination**		Schriftliche Prüfung (90 Min.)	
Bonus benefits						
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)**	90
Duration of module	1 Semester		**Frequency**		Unregelmäßig	
Type of grading	Differenzierte Note		**Verwendbarkeit**		Artificial Intelligence	
Conditions for participation	none					
Recommended prerequisites						
Module's learning outcomes	Upon completion of the module, students will: • have an overview of the evolution of cloud computing and new architectures. • Be able to understand the architectural patterns of cloud native platforms and applications. • Be able to develop applications for container platforms on behalf of containerization principles. • Be able to understand vertical and horizontal scaling of applications. • Be able to maintain and configure monitoring and security components of Kubernetes platforms. • Be able to critically access approaches to versioning software artifacts and develop appropriate strategies for agile software projects. • Know the concepts of asynchronous communication using Apache Kafka. • Have solidified their knowledge on cloud native tools like Docker, Kubernetes, Helm, Apache Kafka and Git					

Module content	Main Concepts of Cloud Computing • Definition of \"cloud native\" • Historical background • Cloud Native and Open Source • Major players (CNCF, Linux Foundation, Apache Foundation) Cloud Native Architecture • Principles and paradigms • Distributed systems • Representation Concepts (C4, UML) Containerization & Virtualization Principles • Container vs. Virtual Machine • Emergence of Docker • Container Images • Image Build • Composing Containers Container Orchestration • Horizontal and vertical scaling • Kubernetes artifacts • Cluster Network • Persistence in Kubernetes • Templating for Kubernetes • Monitoring and Logging • Kubernetes Management • Service Mesh Pub-Sub-Messaging Concepts • Apache Kafka • Distributed logs • Stream processing Versioning • Commit strategies • Branching strategies Development Operation Principles • DevOps • DevSecOps • CI/CD • GitOps
Literature	Literature will be announced in the course.

Entrepreneurship for Engineers (5171514)

Module name english	Entrepreneurship for Engineers				
Type of module	Wahlpflichtmodul		**Responsible for module**	Prof. Dr. Ivan Yamshchikov	
Lecturer	Prof. Dr. Ivan Yamshchikov				
Language of instruction, L. of examination	Englisch		**Semester**	1,2	
SWS	4		**Teaching and learning formats**	Projekt	
ECTS-Credits	5		**Type of examination**	Projektarbeit	
Bonus benefits					
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)** 90
Duration of module	1 Semester		**Frequency**	Unregelmäßig	
Type of grading	Differenzierte Note		**Verwendbarkeit**	Artificial Intelligence	
Conditions for participation	none				
Recommended prerequisites					
Module's learning outcomes	— Students learn how to apply the principles of technological entrepreneurship. — Students can create a Minimal Viable Prototype (MVP) by applying principles of paper prototyping. — Students can create and implement a customer development pipeline can evaluate product market fit and unit economics of the technological product. — Students can create a pitch deck for their project from scratch, evaluate the quality of the early-stage venture capital, and implement a fund-raising plan. — Students understand the overall properties of venture capital markets.				
Module content	1 What is venture capital? — a brief history of venture investment — probabilistic approach to venture investment — venture capital and technological development 2 What is a product? — Why is technology not a product? — Paper prototyping and product market fit — Customer development for engineers 3 What is a pitch deck? — What are the key structural components of a good pitch? — Unit economics — Storytelling for engineers 4 How do you make decisions under stress? — Managing small teams — Trade-off between discipline and creativity — Empathy for engineers

Scientific seminar (5171110)

Module name english	Scientific seminar				
Type of module	Pflichtmodul		**Responsible for module**	Prof. Dr. Magda Gregorová	
Lecturer	Maryam Bagheri				
Language of instruction, L. of examination	Englisch		**Semester**	1,2,3	
SWS	4		**Teaching and learning formats**	Seminar	
ECTS-Credits	5		**Type of examination**	Portfolio	
Bonus benefits					
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)** 90
Duration of module	2 Semester		**Frequency**	Unregelmäßig	
Type of grading	Differenzierte Note		**Verwendbarkeit**	Artificial Intelligence	
Conditions for participation	None				
Recommended prerequisites					
Module's learning outcomes	Upon completion of the seminar students: • can write English academic texts on AI topics taking into account the expected format, structure, and the target audience; can adapt the language and visual support accordingly (article vs. presentation, etc.). • understand the importance of good academic conduct, the boundaries and consequences of plagiarism, and the benefits of open science, transparency and reproducibility, they can design their communication strategy accordingly (open access / open source, experimental documentation, etc.) • can conduct relevant literature search, analyze the quality of texts, can create and maintain a relevant bibliography in standard software tools and correctly reference previous work in their academic outputs • are aware of selected recent trends in AI research and main opportunities and challenges in transferring them to practical applications • can critically analyse academic text and provide constructive feedback, can interact with senior researchers in an informed discussion				
Module content	Note: In summer semester 2024 exceptionally 2 SWS of the seminar will be offered. The remaining 2 SWS will be offered in winter semester 2024/25 Practical research and scientific work skills and principles of good scientific conduct. • Academic writing on AI topics in English (for non-native speakers) - Standard structure of academic texts – theses, technical reports, research articles, academic CV - Specific grammar features and word choices of English academic text and common pitfalls for non-native speakers - Good conduct in academic writing (citations, acknowledgments, plagiarism), open science, transparency, reproducibility - Literature review (dblp, google scholar, journals and conferences, predatory publishers) - Visual support of technical text (visual display of quantitative data, visual communication), academic presentations and poster design - Analysis of academic text, critical evaluation, peerreview process and principles • Academic and research support software tools The seminar will be enriched by a series of invited talks delivered by external academic researchers and/or AI practitioners. Through these the students will learn about: • Current trends and topics in AI research and applications - Transferability of theoretical research results to practical applications - Opportunities, open questions and challenges for AI research and applications (technical, societal, ethical, etc.) - Academic talk structure, audience targeting, academic exchange of knowledge and experience, constructive feedback and academic research discussion - Networking, establishing and fostering collaborations, formal/ informal interaction with senior researchers and practitioners				
Literature	To be defined in seminar				

Ausgewählte Kapitel der Embedded Systems (5071038)

Englischer Titel	Selected Topics in Embedded Systems					
Art des Moduls	Wahlpflichtmodul		**Modulverantwortliche(r)**		Prof. Dr. Arndt Balzer	
Dozent(in)	Prof. Dr. Arndt Balzer					
Sprache	Deutsch/Englisch		**Studiensemester**		2	
SWS	4		**Lehr- und Lernformen**		Seminar	
ECTS-Punkte	5		**Art der Prüfung**		Referat, Kolloquium	
Bonusleistungen						
Arbeitsaufwand	**Gesamt**	150	**Präsenzzeit**	60	**Selbststudium**	90
Dauer	1 Semester		**Angeboten**		Wintersemester	
Art der Note	Differenzierte Note		**Verwendbarkeit**		Artificial Intelligence, Digital Business Systems	
Voraussetzungen nach SPO	keine					
Empfohlende Voraussetzungen						
Lernergebnis des Moduls	Die Studierenden sind in der Lage - Notwendigkeit, Marktrelevanz und das Potential Eingebetteter (mobiler) Systeme zu bewerten, - Herausforderungen bei Bau autonomen fahrender Systeme beurteilen und Lösung entwerfen zu können, - Aufbau und Funktionsweise der Hard- und Software von Regelungssystemen am Beispiel eines Quadrokopters zu beschreiben, einschließlich der Echtzeitanforderungen, - Teile der Systemsoftware zu implementieren, - eingesetzte mathematische Methoden zu beurteilen, - Ansätze zur Verbesserung der Signalverarbeitung zu entwerfen.					
Inhalte des Moduls	Die Inhalte der Lehrveranstaltung werden aktuellen Erfordernissen angepasst. Seit 2020 ist der Schwerpunkt die Entwicklung von Software für ein autonom fahrendes Fahrzeug auf Basis von NVIDIA Hardware Grundlagen des maschinellen Lernen, dabei u.a. künstliche neuronale Netze Maschinelles Sehen, \\\\"klassische\\\\" Bildverarbeitung Bis 2019 war der Schwerpunkt: Entwicklung von Software zur Steuerung eines Quadrokopters Programmierung von Embedded Systems Regelungstechnik, insbesondere PID Regler Sensorik, Telemetrie Mathematische Grundlagen: Kartesische und Polar Koordinaten, Euler Winkel, komplexe Zahlen, Quaterionen, Vektoralgebra Signalverarbeitung: Zustandsschätzer, Bayes-, Gauss-, Kalman-Filter Lageregelung, Yaw Regelung, Telekommandos Bei Bedarf: Entwicklung von Software für MCU mit aktuellen IDEs, teil-autonomes Fahren

Trustworthy AI and AI regulations (5171070)

Module name english	Trustworthy AI and AI regulations					
Type of module	Pflichtmodul		**Responsible for module**		Prof. Dr. Oliver Ehret	
Lecturer	Prof. Dr. Oliver Ehret, Prof. Dr. Christian Kraus					
Language of instruction, L. of examination	Englisch		**Semester**		2	
SWS	4		**Teaching and learning formats**		Seminaristischer Unterricht	
ECTS-Credits	5		**Type of examination**		Schriftliche Prüfung (90 Min.)	
Bonus benefits						
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)**	90
Duration of module	1 Semester		**Frequency**		Wintersemester	
Type of grading	Differenzierte Note		**Verwendbarkeit**		Artificial Intelligence	
Conditions for participation	None					
Recommended prerequisites						
Module's learning outcomes	On successful completion of this module, the learner should be able to: - Understand the challenges of AI systems to existing law - Be able to place AI systems – from a legal standpoint - in civil and intellectual property law - Discuss AI-systems and the risks they are involving in self-driving cars - Outline the role of the selected principles in the context of AI - Evaluate the attempts of regulating AI within the EU to close possible legal gaps - Understand the ongoing measures to give AI systems a place in the legal system - Explain different ethical schools of thought and distinguish their lines of argumentation - Assess the challenges associated with technical innovations against the background of moral values - Evaluate selected applications and dilemmas and argue stringently					
Module content	1. Part Law 1.1. Introduction to law 1.2. AI systems and civil law, e.g. can AI act legally (e.g. by the vicarious agent or proxy) or creating a legal capacity of autonomous systems 1.3. Civil liability of AI systems 1.4. AI and intellectual property 2. Part Ethics 2.1. What is ethics? 2.2. Fairness and trust in AI systems 2.3. Responsibility and liability for AI systems 2.4. Risks of AI for companies 2.5. Human Enhancement 2.6. Autonomous vehicles 2.7. Military applications of AI

Semantic data processing and representation (5171090)

Module name english	Semantic data processing and representation					
Type of module	Pflichtmodul		**Responsible for module**		Prof. Dr. Ivan Yamshchikov	
Lecturer	Prof. Dr. Ivan Yamshchikov					
Language of instruction, L. of examination	Englisch		**Semester**		2	
SWS	4		**Teaching and learning formats**		Seminaristischer Unterricht	
ECTS-Credits	5		**Type of examination**		Portfolio	
Bonus benefits						
Workload	**Workload (Total)**	150	**Attendance time**	30	**Self-Study time (incl. exam preparation)**	120
Duration of module	1 Semester		**Frequency**		Wintersemester	
Type of grading	Differenzierte Note		**Verwendbarkeit**		Artificial Intelligence	
Conditions for participation	None					
Recommended prerequisites						
Module's learning outcomes	After successfully completing the module: • students are able to apply the basic methods of Natural Language Processing and related applications. The students are able to develop result-oriented applications that integrate Natural Language Processing methods. These methods can be based in whole or in part on various forms of artificial neural networks (deep neural networks). • students are able to analyse concrete tasks in the field of natural language processing from applied science or industrial practice and evaluate and select suitable methods and software components from the field of natural language processing. In particular, students are also able to describe and develop suitable Deep Learning architectures. • students are also able to describe, implement and present a corresponding overall software architecture. In doing so, they draw on common frameworks from the field of deep learning (e.g. KERAS, TensorFlow, PyTorch, etc.). They organise themselves and their team independently in the application of learned methods of Natural Language Processing.					
Module content	— Introduction and Natural Language Processing Applications — Text and Speech Basics — Reading scientific papers — Tokenization — Embeddings — Verbal Intelligence — Semantic Representations — Distributed Representations / Word Embeddings — Language Models — Transformers — Large Language Models — Frontiers of modern NLP The model is implementing a learning-by-doing approach. The students read a variety of scientific publications that are fundamental for the topic, present and discuss these contributions as the course unfolds.

Learning of structured data (5171100)

Module name english	Learning of structured data				
Type of module	Pflichtmodul		**Responsible for module**	Prof. Dr. Frank-Michael Schleif	
Lecturer	Prof. Dr. Frank-Michael Schleif				
Language of instruction, L. of examination	Englisch		**Semester**	2	
SWS	4		**Teaching and learning formats**	Seminaristischer Unterricht	
ECTS-Credits	5		**Type of examination**	Portfolio	
Bonus benefits					
Workload	**Workload (Total)**	150	**Attendance time** 60	**Self-Study time (incl. exam preparation)**	90
Duration of module	1 Semester		**Frequency**	Wintersemester	
Type of grading	Differenzierte Note		**Verwendbarkeit**	Artificial Intelligence	
Conditions for participation	None				
Recommended prerequisites					
Module's learning outcomes	- being able to evaluate and to apply modelling techniques for non-standard data - being able to analyse non-vectorial data and to derive and improve predictive models - knowing how to evaluate and assess respective representation techniques - being able to implement pipelines for non-vectorial data analysis - learn the how-to of proximity based learning - learn how to assess, use and potentially extend the respective frameworks - Students know how to characterize, choose, evaluate, assess and construct practical tools for structured data analysis and respective application fields - learn how to use scientific literature and to understand, derive, implement and potentially extend the presented methods				
Module content	The module explains the generic analysis and processing of non-vectorial or structured data like graphs, trees, sequential data or alike. We discuss algebraic methods as well as neural network based techniques. The algorithmic part is shown in matlab, numpy/python or by use of other numerical frameworks. Exemplary the following key topics are addressed: - Particularities of non-vectorial, compositional and structured data - General proximity measures and implications on mathematical models - Mathematical concepts like information theoretic measures,non-euclidean spaces, local and global embedding approaches - Representation by proximity measures and simple learning methods - Particular algebraic and neural network based Embedding techniques - Evaluation methods for the representation of non-vectorial data - Exemplary implementations and applications				
Literature	- The Dissimilarity Representation for Structural Pattern Recognition, Pekalska & Duin, World Scientific, 2005 - Graph Classification And Clustering Based On Vector Space Embedding, Bunke et al., 2010 - Kernels For Structured Data, Gartner, 2008 - Graph Representation Learning, Hamilton, 2020 - Recent publications on learning of structured data are provided / suggested during the lecture				

Mathematical Finance and Machine Learning (5171517)

Module name english	Mathematical Finance and Machine Learning					
Type of module	Wahlpflichtmodul		**Responsible for module**		Prof. Dr. Ivan Yamshchikov	
Lecturer	Prof. Dr. Ivan Yamshchikov					
Language of instruction, L. of examination	Englisch		**Semester**		2	
SWS	4		**Teaching and learning formats**		Seminar	
ECTS-Credits	5		**Type of examination**		Portfolio	
Bonus benefits						
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)**	90
Duration of module	1 Semester		**Frequency**		Unregelmäßig	
Type of grading	Differenzierte Note		**Verwendbarkeit**		Artificial Intelligence	
Conditions for participation	none					
Recommended prerequisites						
Module's learning outcomes	The educational outcomes are as follows. The student that successfully completed the course: — understands fundamental mathematical properties of financial markets — can conceptualise an approach for pricing a new financial tool — has deep understanding of the underlying mathematical principles that are essential for financial markets — can apply those ground principle in practice — can model an empirically observed financial product using machine learning methods					
Module content	The course is dedicated Financial Markets and tools that one can apply to the analysis of the financial data. The course consists of two components: a component on financial markets and a component on the applications of machine learning to financial markets. We start with an overview of standard methods of Mathematical Finance and develop deep theoretical understanding of the stochastic processes behind them. This include: — Notion of Stochastic Processes — Geometric Brownian Motion — Self-financing strategy — Black-Scholes Formula — Greeks — Factor models on incomplete markets — Pricing with dividends — Bond pricing and yield curve — Time series analysis (ARIMA, SARIMA, ARCH, GARCH etc.) — Hamilton-Jacobi-Bellmann Equaltion The second part of the course covers a set of empirically-driven data analysis approaches to financial modelling and decision making under time pressure. The practical aspects of the course include: — processing real financial time series — creating a game strategy for a Texas hold'em Poker bot tournament, where the bots created by the participants compete with one another — analysis of cryptocurrency price dynamics with methods for time series analysis

Fundamentals of Mobile Robotics (5172080)

Module name english	Fundamentals of Mobile Robotics				
Type of module	Pflichtmodul		**Responsible for module**	Prof. Dr. Pascal Meißner	
Lecturer	Prof. Dr. Pascal Meißner				
Language of instruction, L. of examination	Englisch		**Semester**	2	
SWS	4		**Teaching and learning formats**	Seminaristischer Unterricht	
ECTS-Credits	5		**Type of examination**	Mündliche Prüfung	
Bonus benefits					
Workload	**Workload (Total)**	150	**Attendance time** 60	**Self-Study time (incl. exam preparation)**	90
Duration of module	1 Semester		**Frequency**	Wintersemester	
Type of grading	Differenzierte Note		**Verwendbarkeit**	Artificial Intelligence	
Conditions for participation	None				
Recommended prerequisites					
Module's learning outcomes	• Apply the Bayes (filter) formula and sample from probability density functions • Determine and apply probabilistic sensor and motion models • Discuss the steps and components of realizations of Bayes filters • Implement realizations of Bayes filters and compute location estimates for robots • Build and analyze grid maps • Differentiate between localization and SLAM systems as well as outline auxiliary techniques for SLAM solutions • Assess and implement components of landmark- and grid-based solutions to the SLAM problem • Differentiate between different path planning techniques and discuss the steps of collision avoidance solutions • Apply and implement graph-search techniques for path planning • Assess the Markov Decision Process definition as well as the concepts of Utility and Policy • Apply dynamic programming on Markov Decision Problems to compute value functions and optimal policies				
Module content	01. Introduction – Nomenclature, history, state of the art, module logistics 02. Linear Algebra and Probability Primer – Vectors and operations, matrices and operations, axioms of probability, independent events, Bayes rule 03. Bayes Filter – Recursive Bayesian updating, state transitions, Markov property, derivation 04. Probabilistic Modelling – Odometry- and velocity-based motion models, beam- and scan- based sensor models 05. Localization with Nonparametric Filters – Discrete Bayes filter, importance sampling, particle filter 06. Localization with Gaussian Filters – Kalman filter, Extended Kalman filter 07. Mapping with Known Poses – Occupancy maps, reflection probability maps 08. Landmark-based SLAM – SLAM problem, EKF SLAM, loop closing, Rao-Blackwellization, FastSLAM 09. Grid-based SLAM – Scan matching, FastSLAM, improved proposals, selective resampling 10. Motion and Path Planning – Configuration spaces, combinatorial planning, search algorithms, A* with extensions, collision avoidance 11. Markov Decision Processes – MDP definition, utility, value iteration, policy iteration

Ethics and Regulation of AI (5171519)

Module name english	Ethics and Regulation of AI				
Type of module	Wahlpflichtmodul		**Responsible for module**	Prof. Dr. Markus Oermann	
Lecturer	Prof. Dr. Markus Oermann				
Language of instruction, L. of examination	Englisch		**Semester**	2,1	
SWS	4		**Teaching and learning formats**	Seminar	
ECTS-Credits	5		**Type of examination**	Portfolio	
Bonus benefits					
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)**	90
Duration of module	1 Semester		**Frequency**	Sommersemester	
Type of grading	Differenzierte Note		**Verwendbarkeit**	Artificial Intelligence, Digital Business Systems	
Conditions for participation	keine				
Recommended prerequisites					
Module's learning outcomes	Participants - have profound insights regarding the central clusters of ethical challenges of AI - know the basic requirements on AI by established ethical guidelines by the UNESCO, the Council of Europe, the G7 etc. - know how to integrate an ethical assessment in professional workstreams/development processes - know the basics of the new legal framework for AI in the EU that will be established by the AI Act - have insights on current legal discussions on the use of copyright protected material as training data and on the protection of AI's output in terms of intellectual property - get insights on the next phase of the EU's regulation of AI which will address the question of liability - are thereby able to better communicate and cooperate with ethical and legal professionals in their future work environment				
Module content	- AI, a dazzling concept - basic definitions of AI by OECD and EU - basics on ethics in general - clusters of ethical challenges related to AI: - power and responsibility - agency and human/machine relation - biases and discrimination - data ownership/data protection - copyright/intellectual property - job displacement/transformation of work - selected established ethical guidelines and their take on these challenges: - UNESCO - Council of Europe - G7 - Blechtley Parc Declaration - special sector codes: IEEE, ILO - self regulatory codes: Open AI safety guidelines - approaches and standards on how to integrate ethical assessment in professional workstreams/development of AI and AI applications - overview on the new legal framework for AI by the upcoming EU AI Act - further current legal discussions on AI: - how to deal with the use of copyright protected material as training data - how to deal with AI's output in terms of copyright law - next step of regulation: the planed reform of the liability regime for AI by the European Commission				
Literature	Coeckelbergh, Mark (2021): AI ethics, Cambridge, MA: MIT Press. Further basic texts will be announced or made available in the first session				

Master Thesis (5171130)

Englischer Titel	Master Thesis				
Art des Moduls	Pflichtmodul		**Modulverantwortliche(r)**	Prof. Dr. Frank-Michael Schleif	
Dozent(in)	Prof. Dr. Arndt Balzer, Prof. Dr. Peter Braun, Prof. Dr. Frank Deinzer, Prof. Dr. Frank-Michael Schleif, Prof. Dr. Magda Gregorová				
Sprache	Deutsch/Englisch		**Studiensemester**	3	
SWS	0		**Lehr- und Lernformen**	Undefiniert	
ECTS-Punkte	25		**Art der Prüfung**	Masterarbeit	
Bonusleistungen					
Arbeitsaufwand	**Gesamt**	750	**Präsenzzeit**	0	**Selbststudium** 750
Dauer	1 Semester		**Angeboten**	Jedes Semester	
Art der Note	Differenzierte Note		**Verwendbarkeit**	Artificial Intelligence	
Voraussetzungen nach SPO	50 ECTS points				
Empfohlende Voraussetzungen					
Lernergebnis des Moduls	With the submission of a Master's thesis and the successful assessment, students document that they have understood the teaching content of the previous semesters and are able to apply it to tasks independently and successfully. They are able to derive an innovative research question on a selected research area, which includes a sufficiently significant and as yet unresearched research field. They can work on this research question largely independently with an appropriate and meaningful research design and lead to an objectively comprehensible, reliable and valid result. The written result is at the level of international standards of scientific publications and, upon successful completion, demonstrates the competences in terms of connectivity in the direction of doctoral projects.				
Inhalte des Moduls	Independent preparation of a thesis and processing of a theoretical or practical task according to scientific methods.				
Literatur	Is provided based on the topic, but needs also to be identified by the student as part of the master thesis.				

Bayesian Statistics and Learning (5171518)

Module name english	Bayesian Statistics and Learning						
Type of module	Wahlpflichtmodul		**Responsible for module**		Prof. Dr. Martin Storath		
Lecturer	Prof. Dr. Martin Storath						
Language of instruction, L. of examination	Englisch		**Semester**		3		
SWS	4		**Teaching and learning formats**		Seminaristischer Unterricht		
ECTS-Credits	5		**Type of examination**		Schriftliche Prüfung (90 Min.)		
Bonus benefits							
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)**	90	
Duration of module	1 Semester		**Frequency**		Sommersemester		
Type of grading	Differenzierte Note		**Verwendbarkeit**		Artificial Intelligence		
Conditions for participation	none						
Recommended prerequisites							
Module's learning outcomes	- Develop a comprehensive understanding of statistical methods including Bayes's Theorem, various probability distributions, hypothesis testing, and regression analysis. - Gain expertise in Bayesian statistics, covering concepts like conjugate priors, Markov Chain Monte Carlo (MCMC) techniques, and approximate Bayesian computation. - Acquire skills to apply statistical methods to real-world scenarios using Python.						
Module content	• Distributions and conjugate priors • Estimation techniques • Decision analysis • Testing • Classification techniques • Inference • Computational methods						
Literature	Allen B. Downey, Think Bayes 2, online publication B. Lambert, A student's guide to Bayesian Statistics, SAGE Publications, 2018 G. James, D. Witten, T. Hastie, R. Tibshirani: An Introduction to Statistical Learning, Second Edition, Springer, 2021						

Computational Mechanization of Reasoning (5171520)

Module name english	Computational Mechanization of Reasoning					
Type of module	Wahlpflichtmodul		**Responsible for module**		Prof. Dr. Pascal Meißner	
Lecturer	Alex Goeßmann					
Language of instruction, L. of examination	Englisch		**Semester**		3	
SWS	4		**Teaching and learning formats**		Seminar	
ECTS-Credits	5		**Type of examination**		Mündliche Prüfung	
Bonus benefits						
Workload	**Workload (Total)**	150	**Attendance time**	60	**Self-Study time (incl. exam preparation)**	90
Duration of module	1 Semester		**Frequency**		Sommersemester	
Type of grading	Differenzierte Note		**Verwendbarkeit**		Artificial Intelligence	
Conditions for participation	none					
Recommended prerequisites						
Module's learning outcomes	Students will be enabled to - understand the principles of logical and probabilistic reasoning - apply tensor networks to design efficient reasoning algorithms - learn and infer graphical models such as Markov Logic Networks - design Knowledge Graphs respecting Semantic Web Standards - work on research topics of the ENEXA project					
Module content	The module is an introduction to the research topics of the ENEXA project (https://enexa.eu). Starting with the principles of logical and probabilistic reasoning we will apply the formalism of tensor networks to mechanize reasoning in an efficient way. In particular the following topics will be treated: - Principles of Logical Reasoning: Syntax, Semantics, Inference algorithms - Tensor Networks for Logical Reasoning: Representation of Semantics, Sparsity of Sentences - Graphical Models: Tensor Network representation, Bayesian Networks, Markov Logic Networks - Principles of Probabilistic Reasoning: Variable Elimination, Gibbs Sampling - Knowledge Graphs: Semantic Web Standards, Description Logic Reasoners - Inductive Reasoning: Inductive Logic Programming, Maximum Likelihood Estimation All topics will be accompanied by demonstrations and exercises based on the python library tnreason (developed within ENEXA).
